MineWolf Bagger

■ Product Profile

The MineWolf Bagger complements the MineWolf portfolio. Its design and operation is based on the same expertise and infrastructure as other MineWolf machines. The solution consists of a modular tiller head and powerpack which upgrades standard armoured excavators with mine clearance capabilities (e.g. CAT 320, Liebherr 914/924, O&K RH6 or equivalent). MineWolf Systems provides all necessary integration and armoring services as required.

■ Key Features

- Effective clearance of AP and AT mines
- Clears irregular terrain where manual demining is tedious and dangerous: trenches and dams, heavy and dense vegetation, and areas where other machines cannot maneuver
- Ground penetration up to a depth of 25 cm
- Removal of dense vegetation and tripwires
- Tiller application excels in terms of reliability and survivability
- Average clearance performance 1,000 m² – 7,000 m² per day

■ Technical Data

- Weight, tiller + powerpack ca. 5000 kg
- Clearance/working width 1400 mm
- Max. clearance depth 250 mm
- DEUTZ diesel engine 176 kw / 240 hp
- Max. clearance capacity 1200 m²/h
